Dear Authors,

This article deals with a very interesting subject. However, before publication, you need to make a few corrections to the manuscript.

You will find my comments below.

Sincerely yours,

1.- In the methodology section, it is mentioned that women of childbearing age are aged between 13 and 49. Why this interval, since women of childbearing age, according to the WHO, are those aged between 15 and 49?

2.- In the Introduction section, I suggest that the authors add the importance of such a study from a demographic and health point of view.

3.- Why don't the authors include other regions of Kenya in the study? Why Siaya County only?

4.- In the first part of the results section, I suggest that the authors analyze the socio-demographic characteristics of the study population.

5.- Finally, authors must add some limits concerning the statistical methods used and the nature of the data.
