The topic of the use of artificial intelligence in the field of law is very innovative and current. The paper analyzes not only the issue of the use of artificial intelligence in the context of the legal phenomenon but also the problems arising from the use of algorithms in the various sectors of law: the protection of privacy, the copyright ownership of AI-generated work, and the liability and safety of AI-driven vehicles. Furthermore, the authors also deal with the judicial aspects related to the use of artificial intelligence in the world of law, giving an account of some jurisprudential cases. The bibliographical references are adequate, taking into account that this is a recent issue. The paper is not very long, but it is concise, easy to read, and contains many critical and proactive ideas, especially about legislators, for example, those of the European Union and the United States of America, called to regulate the questions raised by the growing use of artificial intelligence in various legal sectors.
