Dear Authors

In this short report, it seems that hypotheses have been presented based on the sources of others. The purpose of this study is not properly stated. It was a good report, though. This article can be a good source for further structural studies on this enzyme. It would have been better if the final result were given at the end of the article. If the structure of the active site were explained more, it would be useful to understand the mechanism of action.

Regards and good luck

Moradian
