

Review of: "A Mini-Review On MXene Based Textiles For Electromagnetic Interference Shielding Application"

Yannick Saouter

Potential competing interests: The author(s) declared that no potential competing interests exist.

This article makes a review on a kind of textiles devoted to protection against electromagnetic pollution and its effect.

This paper could have been shortened at least in the first sections. It could also detail some real world applications where such textiles are effectively used instead of only mentioning results obtained on prototypes in laboratories.

The redaction of the text has also some defaults:

- The first equations have alignment problems
- There are some unjustified uses of initial capital letters (Human, Aluminium, ...)
- At the bottom of page 8/21, there is a sentence without verbs: But the lack of ... usable structures.
- At page 14/21: Should not it be Figure 9a instead of Figure 8a.
