Tropomyosin Alpha-3 Chain Isoform 2

National Cancer Institute

Source

National Cancer Institute. *Tropomyosin Alpha-3 Chain Isoform 2*. NCI Thesaurus. Code C129382.

Tropomyosin alpha-3 chain isoform 2 (248 aa, ~30 kDa) is encoded by the hTM5 allele of the human TPM3 gene. This protein plays a role in the stabilization of the actin cytoskeleton.
