It was a pleasure for me to read this interesting narrative that summarizes the life-long scientific adventure of prof. Ugo Carraro. For those like me who had the honor of collaborating with him and of knowing him a little personally, it is clear that Ugo Carraro lived his scientific adventure as the driving force of his own life, living it with passion and dedication, facing with resilience the unavoidable obstacles and rejoicing in the arduous achievements, through the ups and downs that all adventures reserve for the adventurous.

I will always be personally grateful to him for the generosity he has shown in offering me to collaborate with his group, giving me the opportunity to address problems that were not familiar to me and to meet great scientific personalities at his famous meetings. The Padua Muscle Days have always been forges of ideas, where high quality contributions have been confronted in a friendly atmosphere, enlivened by lively and provocative discussions of which Ugo Carraro was the driving force.

Happy birthday, Ugo, and please continue working. Science and medicine need enthusiastic people like you.
