Review of: "Economics Research in the Twenty-First Century — 25 Years of Scientific Breakthroughs"

Kyriaki Tsilika¹

1. Economics, University of Thessaly, Greece

This is excellent work. The paper provides a review of economic research in the twenty-first century through a thematic analysis of the recent 25-year published research papers from the top five journals in economics. It is well-written and, as it stands, is publishable. Additionally, it offers many interesting insights into modern economic research.

In Section 3, while I align with the author's opinions, I suggest using the term "US" economics instead of "North American" economics. The character of Canadian economics has itself been strongly influenced by US economics.
