Covid-19 vaccine prevalence and its associated factors among rural households in The Gambia: a community-based cross-sectional study	
Abstract	Concise, well written. Authors may want to consider adding 1-2 sentences on the nature of the data generated for the study
Introduction	The authors need to provide more clarity on the scope of the problem of vaccine hesitancy as it concerns The Gambia. Some information about the overall uptake and coverage of EPI in The Gambia will help.
Methodology	Variables are clearly stated; however, please provide research evidence for the method used to calculate C-19 vaccination prevalence. Please provide the ethical approval reference number.
Results	"Other variables found to be significant at a p-value <0.05..." Please provide context for this statement to improve readability.
Table 1	Please provide a USD context for the monthly income and/or relate it to the World Bank Index of Very poor/Poor/Not poor to give clarity for international readers.
Fig 1	This data is better presented as a vertical/horizontal bar chart.
Fig 2	Please justify the relevance of this information as it relates to the stated study objectives.
Discussion	Clearly articulated with comparisons to other research in the area of study.
Conclusion	Answers the study objectives.
