The manuscript titled "The anti-staphylococcal activity of probiotic-containing gelatin

and whey coatings on processed chicken breast" is well-written and reports research with some originality. However, the following comments should be addressed:

**Comment 1:** in the abstract, please adjust  $p < 0.05$ .

**Comment 2:** why did you choose these bacteria for your treatments?

Comment 3: Are these bacteria saving the chicken meat for longer than 45 days?
