Probable Protein E5, Human Papillomavirus Type 16

National Cancer Institute

Source

National Cancer Institute. *Probable Protein E5, Human Papillomavirus Type 16*. NCI Thesaurus. Code C17500.

The E5 protein of the Human Papillomavirus encodes a short hydrophobic peptide, which appears to alter the turnover rate of the EGF receptor in keratinocytes, thereby enhancing their growth. (Virology 280:169-75, 2001)
