Potential competing interests: No potential competing interests to declare.

The paper is well-written and organized. The research is important, and contributes to knowledge on issues related to language preservation. The argument from an AI technology perspective like Natural Language Processing helps to understand potential issues of language exclusion in computer programming.

However, please take note of the line 3 under the heading "3. Transliteration Decision". The statement ending with "Latinalized alphabetical" seems to have an error or incomplete. Do you mean Latinalized alphabets or Latinalized alphabetical order? Please clarify.
