Potential competing interests: No potential competing interests to declare.

The paper is short and fails to present any new idea. It is almost like a survey paper

Proper introduction is required to give an insight to the paper.

The teaching patterns listed are relevant but they are already in use no additions have been made.

The author can make a comparative study based on the teaching outcome and give suggestions.

A detailed literature survey is required and they have to be cited in the paper relevantly

If the paper viewership is large then it has to be presented in a better way to help the readers understand.
