Potential competing interests: No potential competing interests to declare.

1. Abstract is very poor. It only provides the general facts related to the research topic. There is no result-oriented information. Authors should consider rewriting it by providing their own result-oriented information.
2. Figure 1 should be used as a graphical abstract as it has no relevance in the literature review section.
3. There is no discussion about the objective and novelty of the work anywhere in the introduction or literature review section. The author must briefly discuss the objective and novelty of the work in a separate section after the literature review.
4. How do you affirm that the adopted pretreatment methods in this work will help to improve the production of ethanol and ethylene?
