Potential competing interests: No potential competing interests to declare.

The paper is good, but some notes are missing:

1. The researchers did not address SARS, which began at the end of 2010, and is a serial event for Covid-19.
2. It is worth noting the importance of remote work with regard to designs, project management and disasters, and the use of artificial intelligence in addressing the problems that societies go through as a result of disasters, whether they are natural or external by human action, as in wars or others.
3. As we pass through the era of the fourth technological revolution and artificial intelligence, researchers should use new sources for studies related to digital management for all projects and digital transformation.

Among the various and recent sources are the following

Waheeb, Rasha A., et al. "Impact of Pandemic SARS COVID-19 on Different Construction Project Management: Problems and Solutions." *Public Works Management & Policy* (2022): 1087724X221113579.

Waheeb, Rasha, et al. "The prospective of Artificial Neural Network (ANN's) model application to ameliorate management of post disaster engineering projects." Available at SSRN 4208375 (2022).

Waheeb, Rasha Abdulrazzak. "APP innovation to control projects risks management during crises." *EAI Endorsed Transactions on Internet of Things* 8.30 (2022).

Waheeb, Rasha A., Bjørn S. Andersen, and Rafea AL Suhili. "Using ANN in emergency reconstruction projects post disaster." *International Journal of Engineering Business Management* 12 (2020): 1847979020967835.

4. If it had a way of working and collecting realistic field data, it would be closer to reality and accepted by society as a case study and applied as a work system in companies and institutions in the supply chain and give a good impression of the possibility of overcoming the stumbling blocks that companies and institutions may go through in general in the public and private sectors and all over the world, as that pandemic spread All over the world, without exception, originates from China, which is currently considered the largest exporter of commodities and products.

5. Recommendations should be emphasized on the development of remote work and information technology for companies, organizations and institutions all over the world, how to make the world as one city, and concerted efforts and union of the world to get out of this pandemic and ordeal with minimal losses.

Finally, I wish the researchers success, progress and prosperity in their future research that serves the whole world and work together to serve the security of all societies and sustainable development.
