Potential competing interests: No potential competing interests to declare.

After careful review of the manuscript entitled "Inhibiting efflux pumps and resistance mechanisms: A mini review"; it may be concluded that, the quality and standard of the review article is very low. The author has regularly used ornamental language instead of scientific language. The manuscript needs complete transformations with elaborate discussions with appropriate tables and figures. After complete transformation of the manuscript with scientific evidences, it might be considered for publications. Hence, after careful review, I have made the decision that the review article needs to be completely rejected.
