

Review of: "Urban Green Infrastructure Planning for the Bangkok Metropolitan Region: An Empirical Study for Greenspace Expansion"

Shrinwantu Raha

Potential competing interests: No potential competing interests to declare.

The article clearly explains the urban green infrastructure planning scenario with the help of AHP and GIS. The article gives a comprehensive overview of achieving sustainable infrastructure. The integration of cartography and sustainability creates a visual imprint. Authors can enrich the article by incorporating some theories in the literature review section. I am happy to read this article and recommend it for publication.
