

Review of: "Effective use of Waste Materials: A Case Study of Utilization of Fly Ash in Flexible Pavement Structures"

Aghileh Khajeh

Potential competing interests: No potential competing interests to declare.

- The title of the paper is misleading and does not indicate that it is a review paper. Avoid using "case study" for that.
- Please ensure consistency in the font size of your graphical abstract.
- In conclusion, it is stated, "It was found that the use of fly ash provides better moisture resistance, resilient modulus, and resistance to fatigue damage." It should be clarified with what the use of fly ash is being compared. Generally, the conclusion needs to be discussed better.
- You need to restructure your conclusions by first listing the results of this review paper and then presenting important future prospects based on the gaps and necessities found in the literature.
- Future prospects are quite general; they should be more specific and focused on the purposes and applications of fly ash in flexible pavement.
- You should add a few graphical representations to your manuscript as well, making comparisons or providing more important information to the readers.
- You can also update your content by including the findings of papers published in the last year.
