Malignant germ cell tumor of ovary

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. *Malignant germ cell tumor of ovary*. ORPHA:35807

Malignant germ cell tumor of ovary is a rare ovarian cancer (see this term) arising from germ cells in the ovary, frequently unilateral at diagnosis which characteristically presents during adolescence with pelvic mass, fever, vaginal bleeding and acute abdomen.
