Potential competing interests: No potential competing interests to declare.

The Review Article entitled "Nanocarriers for Protein and Peptide Drug Delivery" aimed to explore the development of structure-based nanocarriers designed for drug delivery, which have shown potential to address the limitations associated with protein and peptide drug delivery. A few aspects need to be covered to improve this manuscript's scientific quality.

1. Many pieces of information are just descriptions of facts, without specific examples or scientific discussions.
2. The Review Article entitled "Nanocarriers for Protein and Peptide Drug Delivery", However, there was no discussion or analysis on the use of protein and/or peptide carriers in the paper, and more examples of carrier use should be provided using peptides and proteins.
3. Although this manuscript provides a systematic overview of the topic, it seems to lack clear evidence of novelty, progress/latest findings, breakthroughs, and research focus.
4. In the Microsphere section, Table 1 should provide detailed examples of drugs related to biodegradable microspheres, but this table is not complete and should be supplemented.
5. The images in the manuscript are blurry and not aesthetically pleasing, requiring some modifications.
