Potential competing interests: No potential competing interests to declare.

A very interesting article on an extremely topical subject. Although the topic is innovative, the theoretical framework could be strengthened with more authors for and against the use of AI in teaching, especially in higher education. Authors such as Michel-Villarreal et al. (2023) or Memarian & Doleck (2023) could be included. Some references that may be useful are at the end for the authors' consideration.

The methodology should be more developed, and information should be provided on the sample used. The results may or may not be conditioned by this.
