The article is well written. However, there is at least one minor revisions that author should apply:

The first two sentences of the 3rd section are repeatign the same concept almost with the same words. I'd suggest to reword these two sentences.

Besides this, the article is very generalistic, and it provides some well-known lessons, i.e., being the main conclusion the fact that it is important for auditors to adapt their skills and procedures to effectively audit cryptocurrencies, from my point of view, this does not add much value to the state-of-the-art.
