# Human Papillomavirus-82

National Cancer Institute

## Source

National Cancer Institute. *Human Papillomavirus-82*. NCI Thesaurus. Code C103009.

A virus comprised of a protein coat (capsid) surrounding a circular, double-stranded DNA organized into coding and non-coding regions, which can induce epithelial lesions.

Infection with human papillomavirus-82 may be associated with a high risk for cervical intraepithelial neoplasia.
