Potential competing interests: No potential competing interests to declare.

1. All those mentioned in the Abstract are not available in the main body text.
2. The Introduction mostly covers the technical part of the system, which supposes emphasizing on the current available 3D printing and highlighting the problem/improvement gap addressed by this study.
3. It is good to include a paragraph in the Introduction that consists of the comparison of current multiple extruders for 3D printing, the use of common materials, etc.
4. The last paragraph should be in a separate section from the Introduction.
5. The figure legends should not be in all early capital letters.
6. The diagrams in Fig. 2 - 7 should be explained in detail before every figure is presented.
7. From the overall results, there is no validation of the final outputs.
