

Review of: "[Commentary] The Pursuit of Healthcare by AI: Thoughtful Delivery Needed"

Z Tan

Potential competing interests: No potential competing interests to declare.

Generally, the manuscript discussed the impact of integrating AI into healthcare in the near future with the author's profound insights.

Hope the following comments can give some help to the authors.

1) The first paragraph: "Artificial intelligence (AI), technically machine learning (ML), ...". Actually, ML is one of the main technical methods of AI, but AI is not equivalent to ML.

2) The second paragraph: "ML in dermatology involves 'computer vision'". Medical imaging is also a typical discipline that involves computer vision. So, could you please revise this sentence to "ML in dermatology and medical imaging involves...", and also add some comments on the use of ML in medical imaging?

3) The author holds a cautious attitude towards the application of artificial intelligence in healthcare. Can the author provide some practical suggestions for the future development direction of artificial intelligence in healthcare?
