Thanks to the authors for the good paper. However, I have some comments as the following:

The comments are:

1. Abstract needs more details. Please highlight some core findings of the results in these sections.
2. Abstract - page 1- Define what are R_f and UV-- define the abbreviations.
3. Introduction should be focused on novelty of the work. Authors also did not care to reveal the scientific novelty and overall importance of their research. And needed to added Aim of the work.
4. The word Fig. in all paper change into → Figure uniform the used in all paper as Fig. (3D and 3E).
5. Improve the conclusion to get all the finding results.
6. Reference needed update and constant in the same format.
7. In table 1, columns heads should be written in a better way.
8. Authors should indicate how they determined R_f value in Table 1.
9. generally, correct the verbs in all manuscript.

Final verdict

The paper is acceptable but needs slight improvement to enhance quality. I recommend it be published **after a minor revision**.
