The work done is good but not well explained in the paper. The introduction is not thorough; it needs to include specifically the main issues to be highlighted, besides parking issues, such as the methods used previously in other similar works on smart parking systems. The result analysis is not well explained; no comparative study was done on how your method differs from others and what solutions are provided. Doing a miniature sample for testing is not enough. The result is not strong enough to support your claim. The conclusion is weak.
