The research article contains an extensive analysis on GPT models and their usage in Education and Human Development. I feel the authors were lost around from their main objective, The article lacks a clear and distinctive flow on how GPT can improve or how it is improving the education sector. To justify this the authors had provided some thoughts but they are that much clear. It would be a great help to the academicians and students if more precise GPT usages with learning Management systems or evaluation part or how it increases the students understanding or recalling ability. It would be a great help if the authors can update their research work in these aspects.
