Desmoplastic Fibroblastoma

National Cancer Institute

Source

National Cancer Institute. *Desmoplastic Fibroblastoma*. NCI Thesaurus. Code C27515.

A rare benign soft tissue neoplasm characterized by the presence of an abundant collagenous or myxocollagenous matrix, spindle-shaped, and stellate-shaped fibroblasts. It usually presents as an asymptomatic, slowly growing subcutaneous mass. The most common sites of involvement are the upper arm, shoulder, and lower limb.
