

Review of: "The Role of Platelet Rich Plasma Injections in Cases of Stress Incontinence"

Eyad Alomari

Potential competing interests: The author(s) declared that no potential competing interests exist.

I can see the hard work that you put to complete this study. However, there is some points to be mentioned. The article could be written in a smoother way so the reader can easily understand the idea of the study, especially in the abstract (the writing was not catchy). The control group was preferred (No control group for this essential study). The sample size was somewhat small, so your conclusion should be supported with other trails.
