Potential competing interests: No potential competing interests to declare.

This paper is interesting; however, I have some comments which may help to enrich its contents. Firstly, the abstract must include:

1. Provide research problems and objectives
2. Provide applied research methods
3. Provide research results
4. Provide relevant keywords
5. Please put more emphasis on geometric methods: whether you do this method manually or with the help of software, please Add 1-2 sentences implementing the research results in this abstract section.

Are there no previous articles on similar topics?

It is best to create a methodology in a research flow diagram, so that the beginning of the work, the work process, and the results you want to expect are depicted.

What are tables title (1)-(6) used for, to form?

Please add information to the equation.
Keep on.

Thank you very much,
