Review of: "Two Cases of Non-Surgical Hypoparathyroidism That Were Diagnosed with Delay"

Mireia Pascua Solé¹

1. Consorci Sanitari de Terrassa, Terrassa, Spain

Both are very interesting cases worth publishing.

Introduction

I've missed one cause of hypocalcemia, such as hypomagnesemia. As well as I've missed some numbers about the prevalence of hypoparathyroidism. Maybe this article could help you:
<https://academic.oup.com/jcem/article/101/6/2273/2804718>

Do you know the prevalence of hypocalcemia in Ukraine?

Cases

In order to facilitate the reading of the paper, I recommend collecting the findings of the patients' examinations in a table for each case instead of text.

Discussion

It's fascinating how parathyroids work. Do you believe these people have lower levels of calcium since they were born?

In case 1, it seems feasible, and due to the various interrecurrent diseases, the hypocalcemia could have been worsened. However, in case 2, it doesn't seem so to me. I understand you are investigating the cause, but even with lower calcium levels than in case 1, he had no Trousseau or Chevostek. How can it be? Any idea?

Misspelling

Hypocalcemia is misspelled twice in the definition of CATCH22.
