# Acetazolamide-responsive myotonia

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base.*

*Acetazolamide-responsive myotonia. ORPHA:99736*

Acetazolamide-responsive myotonia is a form of potassium-aggravated myotonia (PAM, see this term) which shows dramatic improvement with the use of acetazolamide (ACZ).
