# Simple Virilizing 21-Hydroxylase Deficiency

National Cancer Institute

## Source

National Cancer Institute. *Simple Virilizing 21-Hydroxylase Deficiency*. NCI Thesaurus. Code C132096.

A classic form of congenital adrenal hyperplasia that is characterized by severe 21-hydroxylase deficiency, resulting in glucocorticoid and mineralocorticoid deficiency, but without clinically significant salt wasting, and with androgen excess, which causes virilization in female infants.
