Potential competing interests: The author(s) declared that no potential competing interests exist.

Comments:

1. Can the authors make it clear and specific on how the present study help in solving the contemporary problem? The possible effects of the results presented on the performance of such applications should be discussed.
2. Authors should check the typo, grammar, and formula of the manuscript.
3. The conclusion section is not proper and has to be revised. This section should demonstrate the results by percentage and compare them by data and numbers to show the best scenario
4. This article needs to be advanced considerably in length by focusing on the new contributions (with papers recently published) that authors claim and justify, based on their work, and why. The authors should elaborate on their new findings that are worthy of consideration for publication in a journal.
5. It is an interesting topic and many researchers have been working in this field, which was at the peak of work in this field from 2010 to 2017. But since 2017, researchers have been working on this subject, and this article can be considered as an example of those articles.:
