Potential competing interests: No potential competing interests to declare.

My comments and suggestions:

The methodology is robust and the findings of the study align with the study objectives.

The result should be presented in past tense for instance the median age of the participant was 32.75.

The percentage prevalence of overnutrition among women should be included in the abstract. The author has to be specific, what was written was that the prevalence is high.

The title of the article should be "Prevalence of Overnutrition among Married and Cohabiting Women in Nigeria. Findings from the 2018 Nigeria Demographic and Health Survey.

Thank you
