**Potential competing interests:** No potential competing interests to declare.

I have thoroughly examined the paper titled "Contrasting Construction and Business Projects: Implications for Project Management Techniques." Overall, the paper demonstrates a satisfactory level of quality and strength. However, I would like to highlight a few areas that require attention and improvement. Firstly, I recommend modifying the abstract to provide a clearer and more concise summary of the paper's objectives, methodology, and key findings. A well-crafted abstract will help readers quickly grasp the essence of the research and its significance. Secondly, the conclusion section could benefit from further development. It should effectively summarize the main findings and their implications for project management techniques in both construction and business projects. Additionally, it would be valuable to discuss potential avenues for future research in this field. Furthermore, I suggest incorporating additional references to support the paper's claims and demonstrate its contribution to the existing body of knowledge. By referencing relevant studies, theories, or industry practices, the paper can strengthen its arguments and bridge any research gaps identified. In conclusion, "Contrasting Construction and Business Projects: Implications for Project Management Techniques" is a commendable piece of work. With some modifications to the abstract and conclusion sections, as well as the inclusion of more references, the paper will further enhance its impact and provide valuable insights to the project management community.
