# Prostate Acinar Adenocarcinoma, Sarcomatoid Variant

National Cancer Institute

## Source

National Cancer Institute. *Prostate Acinar Adenocarcinoma, Sarcomatoid Variant*. NCI Thesaurus. Code C5530.

A rare morphologic variant of acinar adenocarcinoma of the prostate gland with unfavorable prognosis, composed of both malignant glandular and sarcomatous components. The sarcomatous component contains a malignant spindle cell proliferation or specific mesenchymal elements including osteosarcoma, chondrosarcoma, and leiomyosarcoma.
