Activated Mature Gamma/Delta T-Lymphocyte with a Cytotoxic Phenotype

National Cancer Institute

Source

National Cancer Institute. *Activated Mature Gamma/Delta T-Lymphocyte with a Cytotoxic Phenotype*. NCI Thesaurus. Code C45341.

A mature lymphocyte whose T cell receptor, a gamma polypeptide chain linked by a disulfide bridge to a delta polypeptide chain, has recognized specific foreign antigens and self MHC antigens. This type of cell is most often found in the gut and epidermis.
