Potential competing interests: No potential competing interests to declare.

The summary is well prepared, responding to the structure recommended in any scientific summary.

The introduction is well argued with current quotes, although it would be advisable to expand the explanation of the topic a little more to facilitate its understanding for the reader.

The rest of the document is well prepared and argued, with results in line with the analyses carried out. However, I would expand the explanation of the video game used a little to put the reader in context.
