

# Review of: "The Birth Satisfaction Scale: Igbo adaptation, validation, and reliability study"

Christe D monte

**Potential competing interests:** No potential competing interests to declare.

This is a well conducted study. Showed good efforts have been taken to gather data.

Were there teenaged women who delivered ?

If YES, The results could include outcome of teenage women separately

If the study could include women with medical disorders to know their level of birth satisfaction , as this is an important information?
