Review of: "Mechanisms of Selection on Cancer-Causing Mutations"

BOjie Cong¹

1. Harbin Medical University, China

This review article provides an insightful summary of “mechanisms of selection on cancer-causing mutations.” It is skillfully composed, with a thorough background description.

1. If you could provide a table summarizing the selection mechanisms caused by the cancer mutations you listed, it would be easier to understand.
2. Suggest exploring how lifestyle factors such as diet affect the microenvironment and lead to tumourigenesis.
