Potential competing interests: No potential competing interests to declare.

I think this is a very interesting research manuscript.

I hope my recommendations can help:

1-) You can be cautious about the following statement as your study cannot itself prove that:

These findings suggest that AI tools are now being used to augment rather than replace workers and that efforts to promote AI adoption and upskilling benefit both workers and firms.

2-) The method section seems interesting and consists of big data.

3-) You can add a statistical analysis section as you generally give more information about the implemented methods.

4-) You can add more limitations.
