

Review of: "Factors Affecting the Safety Management Practices of Road Construction in the Sidama Region Road Administration"

Tryson Yangailo¹

¹ University of Zambia

Potential competing interests: No potential competing interests to declare.

Great work with greater possibility of contributing to the body of knowledge and Sidama region in particular, provided some revisions are done.

Abstract

1. This sentence is not necessary in the abstract and should be removed”***These variables are statistically significant at a 1% level***’.
2. Replace descriptive analysis with regression analysis. The conceptual framework and the analysis conducted show that the study focused on regression analysis and had very little to do with descriptive analysis.
3. It is not clear how the interviews were conducted and how the collected data were analyzed. This study clearly used a quantitative approach and not a mixed method, as a qualitative approach was not used.

Introduction

Reduce the number of questions to three or four. But I would recommend mirroring the questions into objectives and removing the research questions and keeping the objectives.

Literature Review

Add 8 to 10 more recent literature from 2019 to date. There are few recent papers in this section.

Conclusion

Under this section, add subsections of “Limitations of the Study” and “Future Study Recommendations”

Citation and Referencing

Please revise the whole document to have a uniform citation style in both the intext citations and reference list.

Thank you for the opportunity to review this paper.
