Potential competing interests: No potential competing interests to declare.

The authors have chosen a very important and ethically relevant topic for this commentary. However there is lack of sync between the title and the content. There is no elaboration on how vaccine hesitancy towards well established and safe vaccines has developed following covid vaccination campaign. Kindly revise the title or give sufficient evidence to justify the current title.

I agree with the authors that there is a definite need for data transparency. The need for continued pharmaco-vigilance has been stressed upon in several published scientific papers, which should be quoted by the authors, to make their argument stronger.

Inclusion of information in tabular form will give more clarity to the readers.

Overall, a good write up, worthy of publication.
