This is an interesting paper.

There are many papers on the analysis of the negative externalities of transportation infrastructure projects. It is suggested to improve the theoretical review of the literature

From the perspective of structure, the author attributed the cause of asthma to the impact of transportation facilities, and more data analysis is needed for empirical logic. Asthma is caused by multiple factors, and how much effect Cross Bronx Express has caused may be further demonstrated through a more rigorous model.

Regarding the cost-benefit analysis, we look forward to seeing more quantitative analysis and empirical results.
