Dear Editor,

This article makes a good contribution to the discussions regarding tuberculosis recurrence.

The author discusses the rates and reasons for relapse of pulmonary tuberculosis in adults. Information from 143 patients was analyzed using a structured questionnaire based on the research questions.

Summary: Abbreviations (BBT and BCT) are not advisable.

Results:

In Table 3, there is an error in the information on line 1 (yes). The number 14 should be on the NO line.

In Table 4, the percentage values are in the effective column along with the gross values found.

Household size values in Table 6 need to be formatted as they are out of alignment.

Conclusion: Was not highlighted as part of the discussion.
