The paper titled "Revitalizing Key Conditions and Integrated Watershed Management Approach to Sustain Water Availability and Agriculture in Semi-Arid Regions" is informative, but there were some areas that could be improved. The paper provides a good overview of the constraints that impede the successful implementation of integrated watershed management approach and the key conditions necessary for its sustainability in semi-arid regions. However, I found the paper to be too focused on the theoretical aspects of the approach and lacked practical examples of its implementation. Additionally, the paper could benefit from more detailed explanations of some of the key concepts and terms used. As a reader who is not an expert in the field, I found some of the technical language to be difficult to understand. It could benefit from more practical examples and clearer explanations of key concepts.
