

Review of: "Valorization of palm oil wastes into oyster mushrooms (*Pleurotus HK-37*) and biogas production"

Eslam Al-Sakkari

Potential competing interests: No potential competing interests to declare.

The study is interesting and can be published after minor revision. In particular, it is recommended to extend the part mentioning the novelty of the work and the motivation to do it at the end of the introduction section. In addition, it is recommended to add a section at the end of the manuscript to discuss the economic feasibility of the proposed idea and its environmental impact when being applied on large scale.
