**Potential competing interests:** No potential competing interests to declare.

- Web-Based Crime Management System for Samara City Main Police Station is a website application for police department with the use of XAMPP and mySQL.
- Overall, this is a good web based system for storage of data for reporting or keeping of reports document with regards to police department.
- The development of the system was detailed from the structured and use case diagram which gives out the detailed planning of the system but the objectives with the problem statement for this project is listed as a long list. Do try to only concentrate on the major problem to be achieved of the system.
- This project lacks method of testing's of the user page namely the web pages that has been developed.
- It was not clear how the system webpages are being developed, no mention on the language or scripts used for developing the webpages.
