

Review of: "Internet of Things in Smart Grid: A Comprehensive Review of Opportunities, Trends, and Challenges"

Kostas Kolomvatsos¹

¹ University of Thessaly

Potential competing interests: No potential competing interests to declare.

The paper contains too many small sections that are not providing in detail the envisioned review. It lacks a qualitative assessment of the studied systems and needs to be significantly expanded. More details are required, especially in 'core' sections like Sections 5 & 6. Finally, the identified challenges are not explained well.
